

How it works

Interview Management System

PROBLEM: The recording of interviews safeguards suspects' civil liberties, protects police from accusations of misconduct, and increases conviction rates by allowing juries to see the suspect's behavior during the interview. Many states encourage recording, and some have passed legislation to require recording.

Investigators who record interviews; however, are faced with the challenge of finding an easy-to-use and reliable recording system. Many recording devices were designed for other purposes, and as a result they are complicated to use in a law-enforcement scenario. Furthermore, many devices produce low quality video and audio. Searching through hours of interview tape can be cumbersome and time consuming. Storage and the longevity of evidence is also an issue in departments with small evidence closets.

SOLUTION: An interview management system designed expressly for law-enforcement that allows you to digitally record, store, and search your interviews in a simple and

Review recorded interviews and notes through CaseCracker's user-friendly interface.

efficient manner. Cardinal Peak's CaseCracker™ Interview Management System provides high quality audio and video recording and has features to enhance your investigative work. Compared with other available solutions, CaseCracker increases conviction rates and saves investigators' time.

CaseCracker records video and audio in two ways. First, an evidentiary DVD is generated in real time during the interview, and can be secured in to evidence immediately at the conclusion of the interview. Second, a working copy of the interview is stored electronically in the CaseCracker database. CaseCracker allows you to keep your notes with the video for easy searching later. Search through your notes by keywords. Search multiple interviews for certain information. CaseCracker also has many information-sharing features such as exporting notes via email, burning clips or the entire interview to DVD, burning a CD of the audio for transcription purposes, and exporting still images.

For more information, visit Cardinal Peak's web site at www.cardinalpeak.com, or call (303) 665-3962.

CaseCracker is a secure and reliable stand-alone unit.
